TECHNICAL DATASHEET

ANTIFREEZE **36-1781, 36-1784, 36-1789**

The product is a permanent antifreeze liquid for radiators. It is a powerful product since it contains special rust-preventive agents, working for a long time. Its main feature is keeping water pH unchanged and resisting acidity caused by variations of temperature inside the radiator.

It also keeps the radiator cleaned and prevents foam, rust and evaporation. The special organic inhibitors here contained make it a long-lasting antifreeze. Its stability is granted for 3 years: after this period replacing the fluid is recommended.

CHEMICAL COMPOSITION: Organic corrosion inhibitors, >90% Ethylene Glycol, <0,1% Bitrex.

PH: pH 8,0 – 9,0.

DIRECTIONS FOR USE: Thin the product with water following the directions of the labels, in accordance with the protection required. Dilutions at 50%
