Model A Ford LED Headlights

by Tom Endy

Led heqdlighst for the Model A Ford are available in a unique package. They are a direct plug in replacemnt of the original bulb and they will work on both 6 and 12 volts. And they are extremely bright.

You can purchase them direct from Logo Lights by going to their web site. They are also available from Bratton's Antique Auto. See their 2019 parts catalog, page 82, $29.95 each.

They are a direct replacement for the stock bulbs. No special socket or reflector is required. These bulbs will work on any 6V, 8V, or 12V positive or negstive ground electrical system. They fit right behind the stock hedlight lens in the original sockets, and will allow you to focus the bulb as Ford originally specified. They will work with a generator or an alternator. The color is 6500K, which is a bright white. Low beam current draw is 0.8 amps at 6.3 volts. High beam current draw is 1.4 amps at 6.3 volts.
