Front curtain

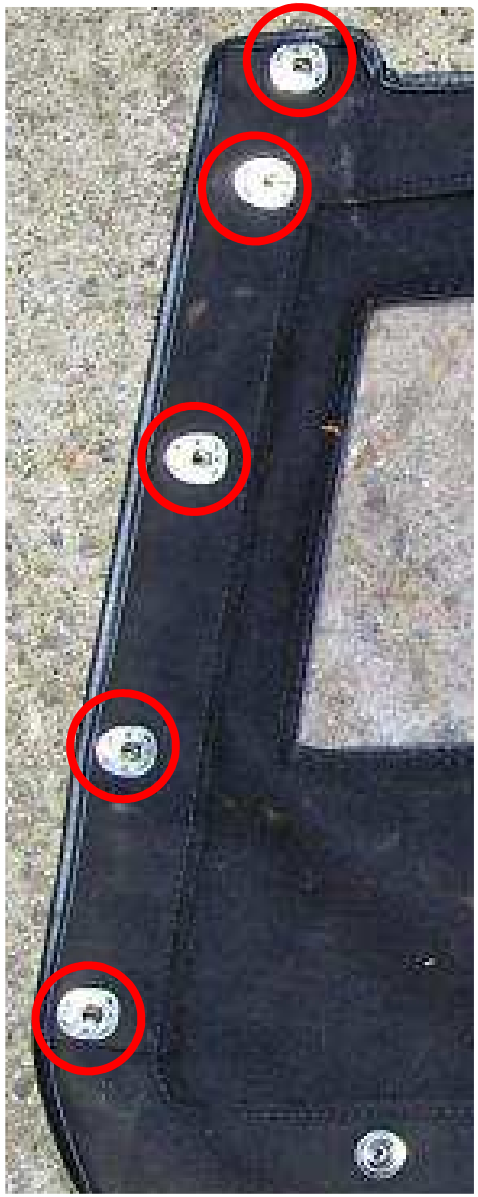

Front Curtain

The blue circle on the drawing is from the flap and not the curtain. Seen on the picture to the left. The new curtain uses a little different way.

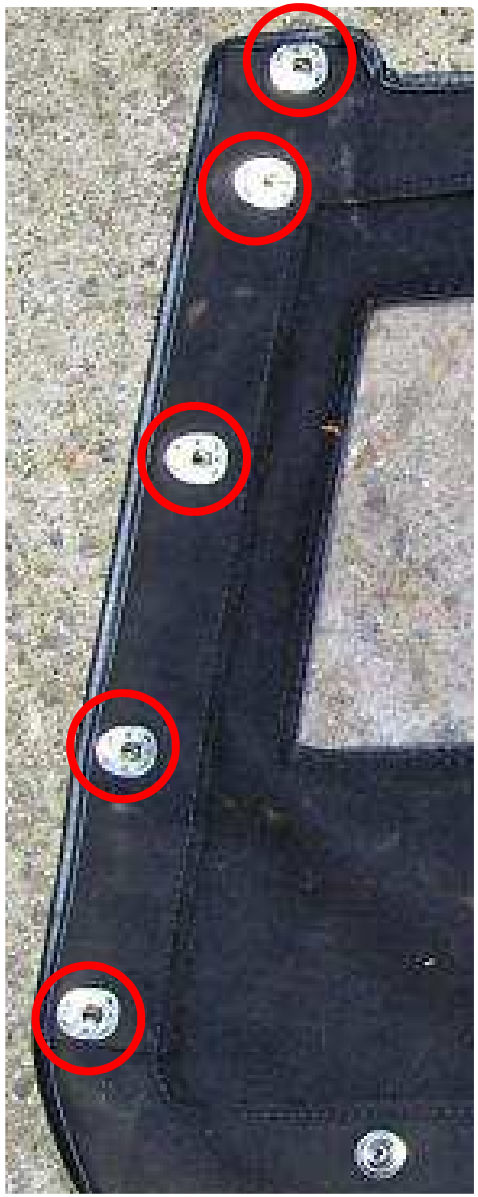

Lift the dot fastener 2x5x A-37103-F

Front Curtain

So why are there 2 length?

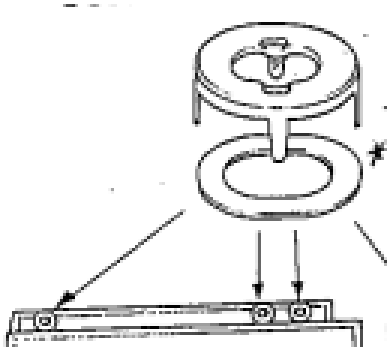

Front Curtain

There seems to be a difference between the old and new version.
The old flap must have been fixed on the insight only, whereas at the new one has a v-cut to allow fixing it to the outside of the roof ribs.
Furthermore it seems that the old version, unlike the new one, had the flap fixed to the curtain with the red dot.

Front Curtain

Nr. 1&2:

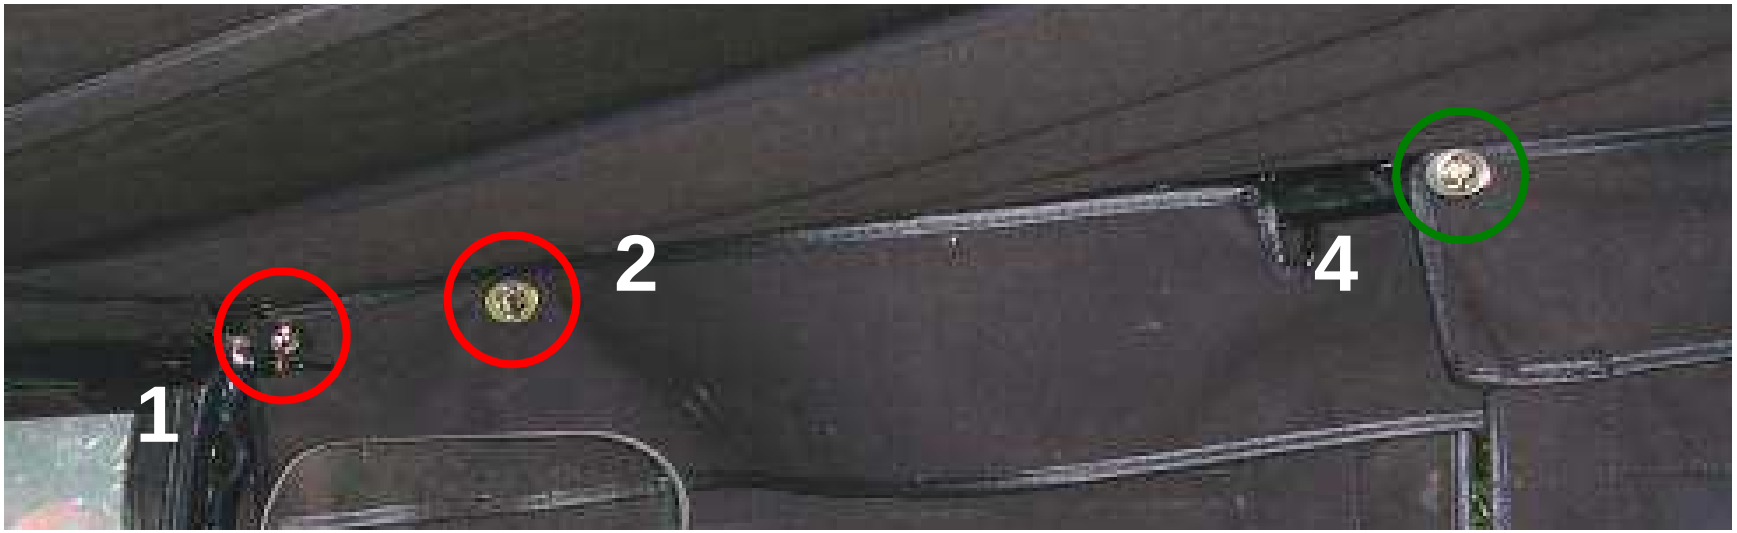

Nr. 3:
Seems to be fixed at the outside of the frame

Front Curtain

Here it’s clearly shown that the last fastener on the flap is fixed to the outside of the roof rips. This will have the advantage that rain and wind will kept to the outside of the middle curtain.

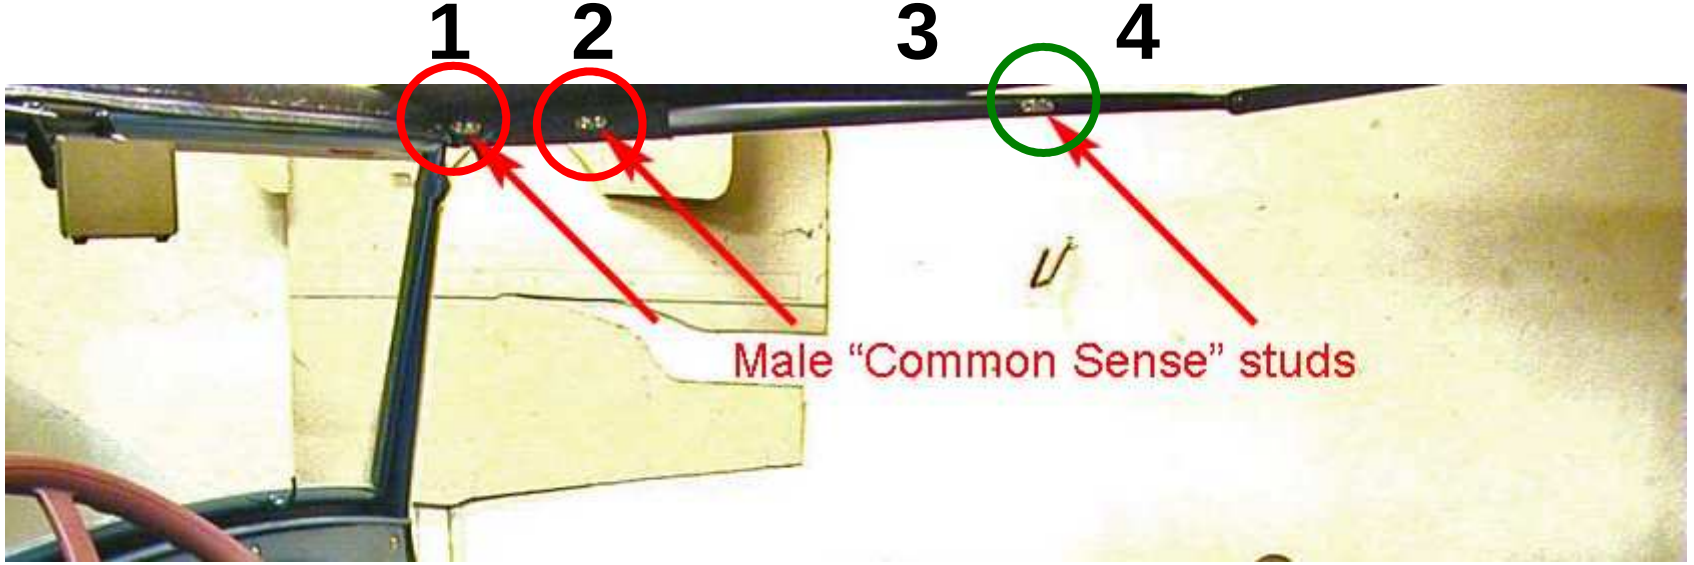

Unclear to me is, what kind of fastener is used. Looking at the picture before it must be one of those:

Nr. 3 (not seen, as it is on the outside):
holds the front flap

Front Curtain – Roof ribs

Nr. 1 & 2:
Hold the front flap

Nr. 3 (not seen, as it is on the outside):
holds the front flap

Nr. 4:
This is fastener is on the inside of the frame, and fixes the middle curtain

Middle curtain

Middle Curtain

It seems as if there are two versions here as well. The fasteners in red seem to be different.

Middle Curtain

The little triangle gives room for the screw that holds the front frame

Nr. 5:

Nr. 6:
Which one?

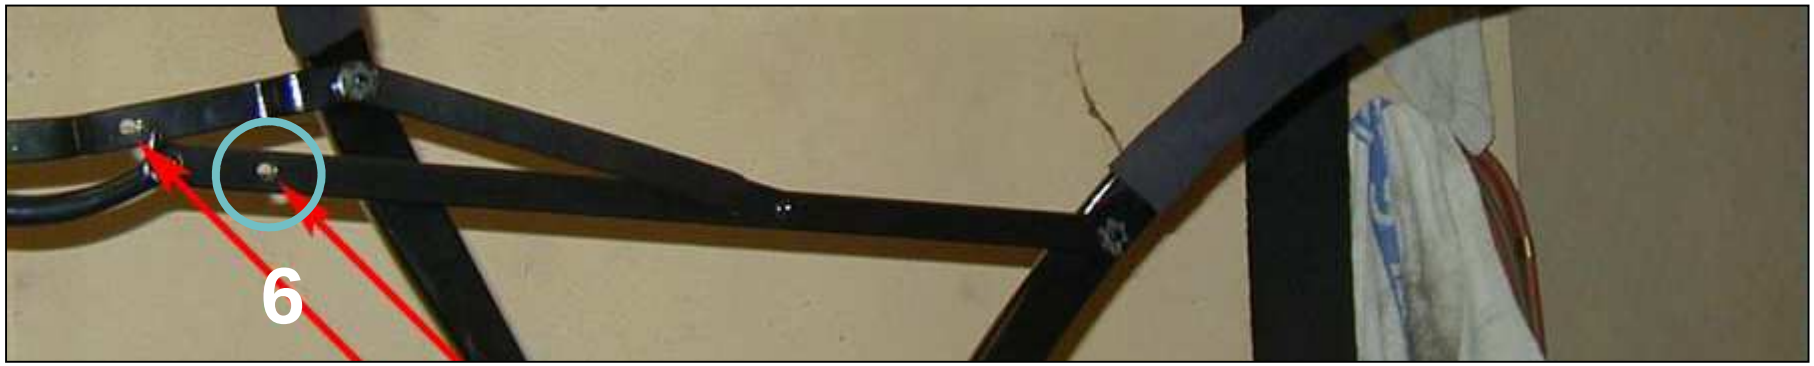

Middle Curtain

Nr. 5:

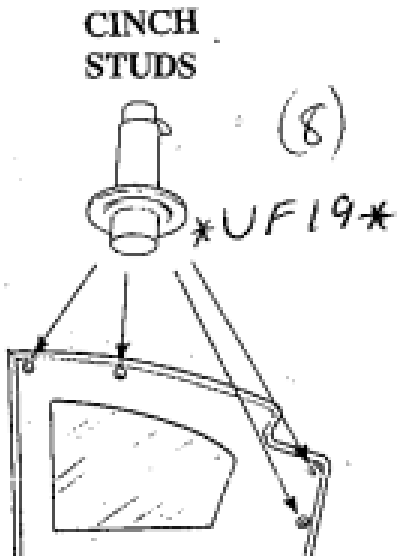

Nr. 6: The hole in the roof frame where the cinch post type studs fits into

Back curtain

Back Curtain

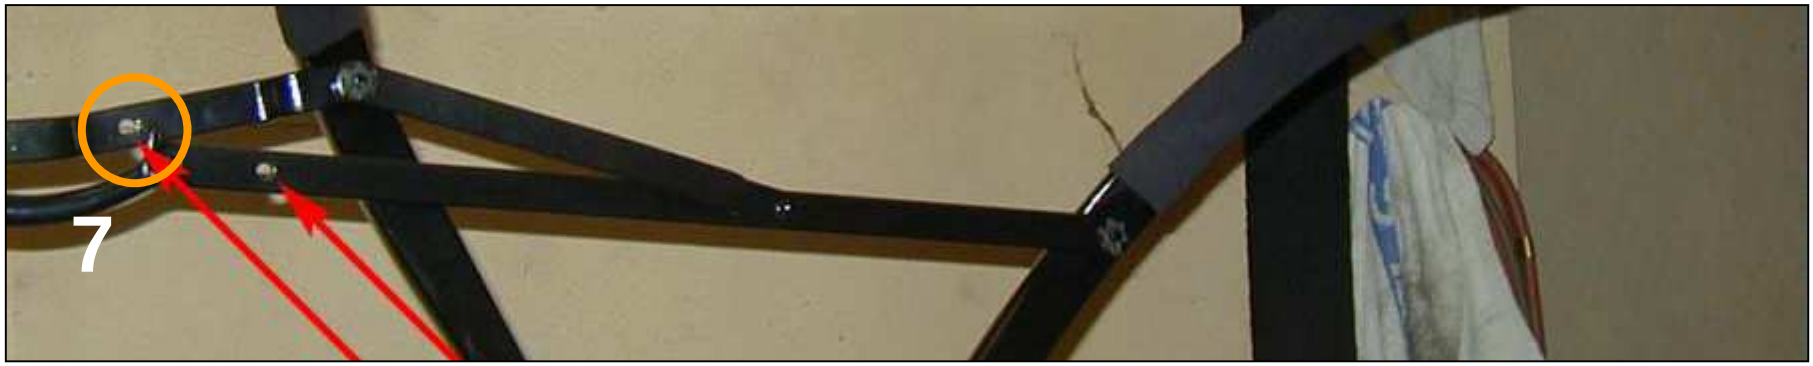

It seems that the drawing uses a little different version, with one less hole.
The fasteners are fixed to as follows:

7	Top rib	10	Canvas
8	Canvas	11	Canvas
9	Roof ribs		

Back Curtain

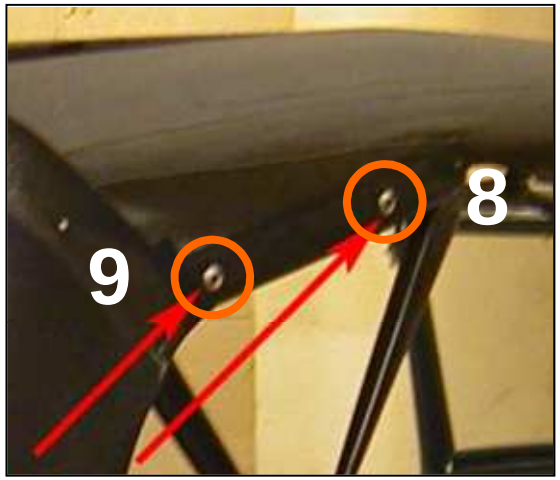

Holes in the roof frame for Cinch post type

Nr. 9:
Is fixed to a chinch post on the special flap, better visible on the next picture

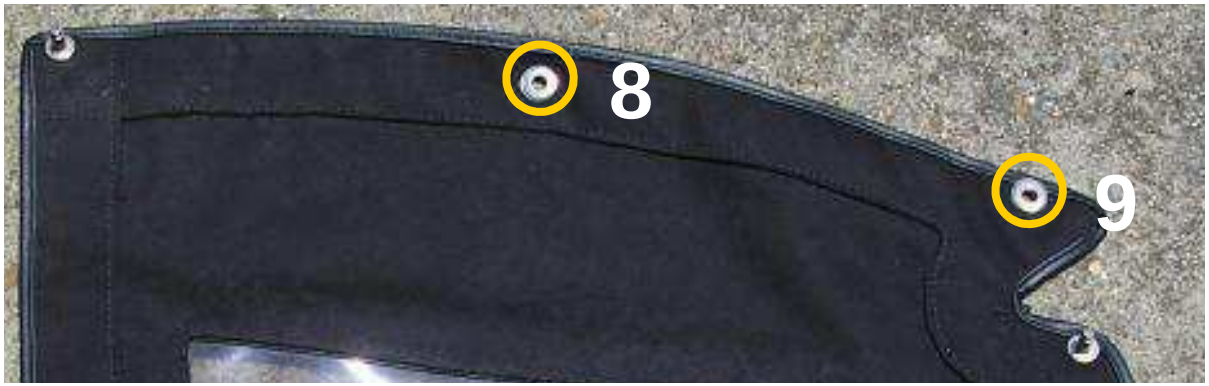

Back Curtain

Nr. 8 & 9:
Are fixed to a special flap (not the top canvas) and are facing inwards.

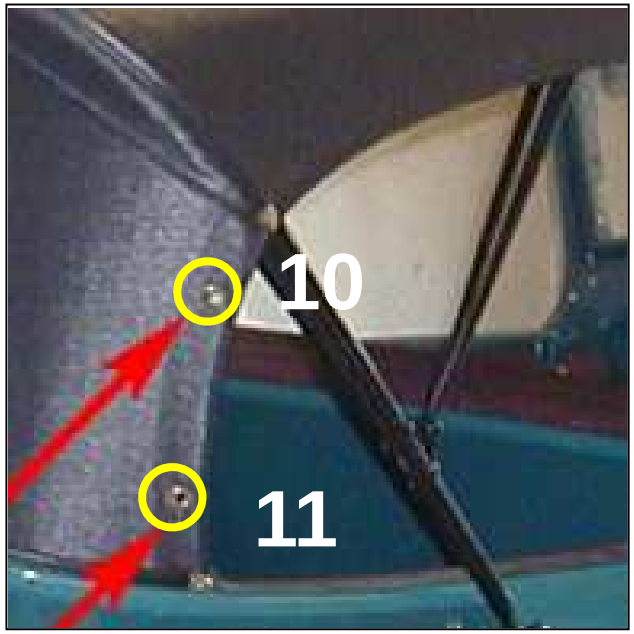

And its counterpart:

Nr. 8 & 9:
Are fixed to the flap

Back Curtain

Nr. 10 & 11:
Fixed to the roof canvas

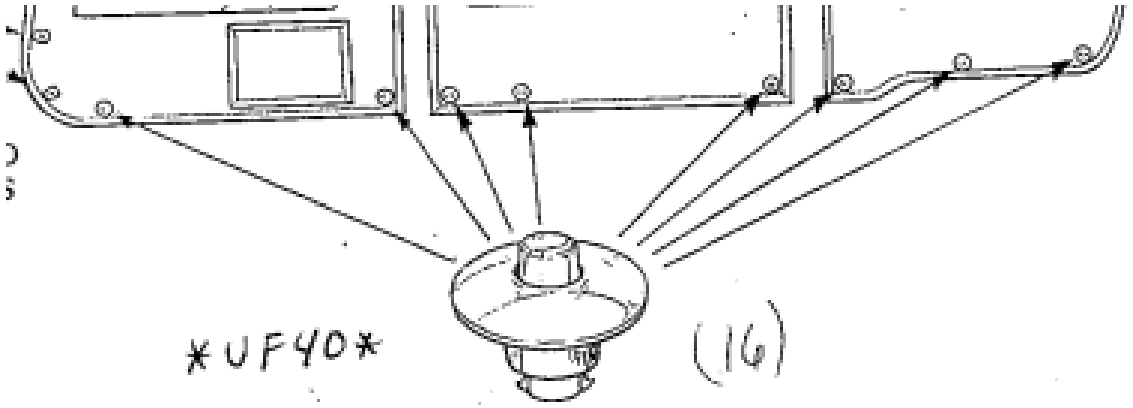

Nr. 10 & 11:
Fixed to the curtain

Back Curtain

Its not the best picture because the fastener in front of the rip is misleading.
Its not fixed to the rip, but to the flap behind it.

Body sockets

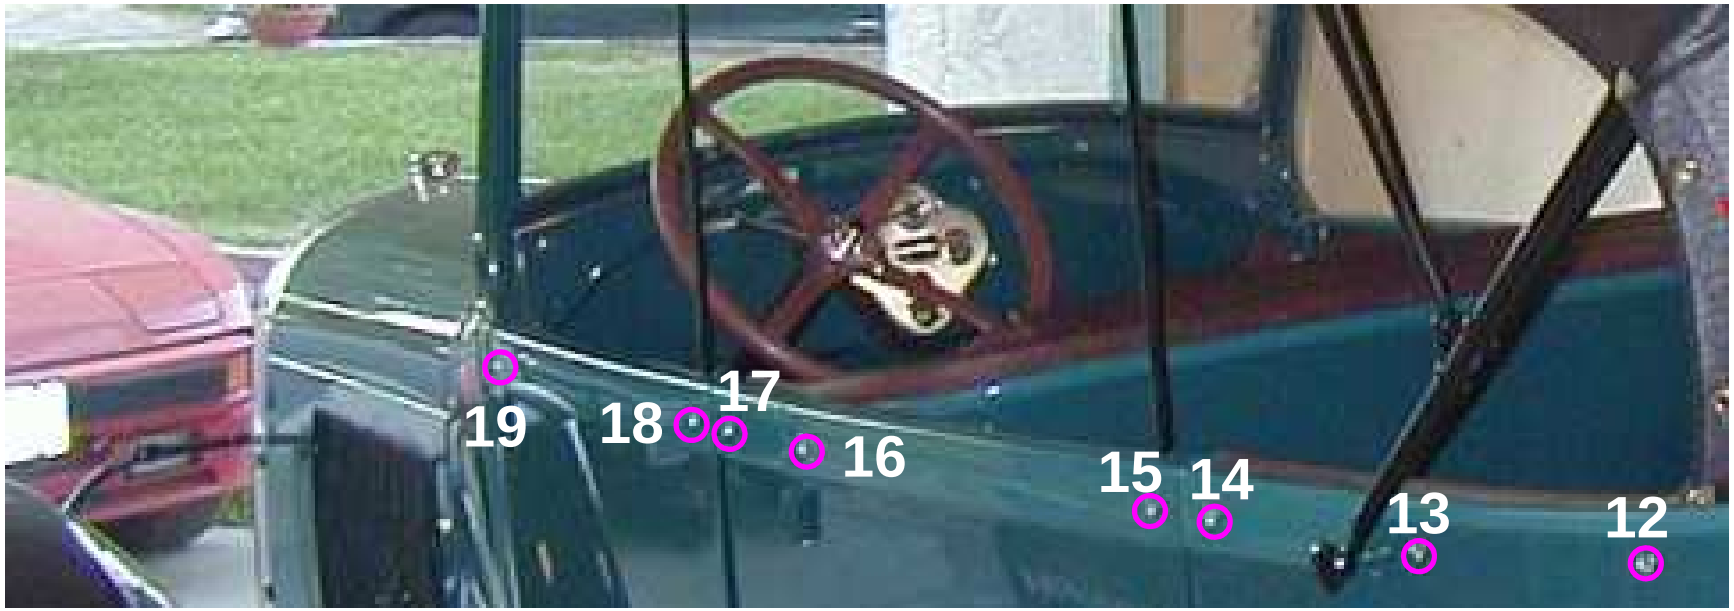

Those are the sockets that are fixed to the chassis

And those the fasteners on the curtain

Body sockets

12	Back curtain
13	Back curtain
14	Back curtain
15	Middle curtain
16	Middle curtain
17	Middle curtain
18	Front curtain
19	Front curtain

Resume

There seem to be various different version. Maybe you guys know best which ones are the “correct” ones (if such a thing exists).
But this picture from SilverGhost’s Phaeton shows that there are no flaps at all… The side curtain is directly fixed to the roof rips.
