TonysFla had a posting about placing a 30/31 bracket in a '29 on Ahooga.com, well here are his pictures.

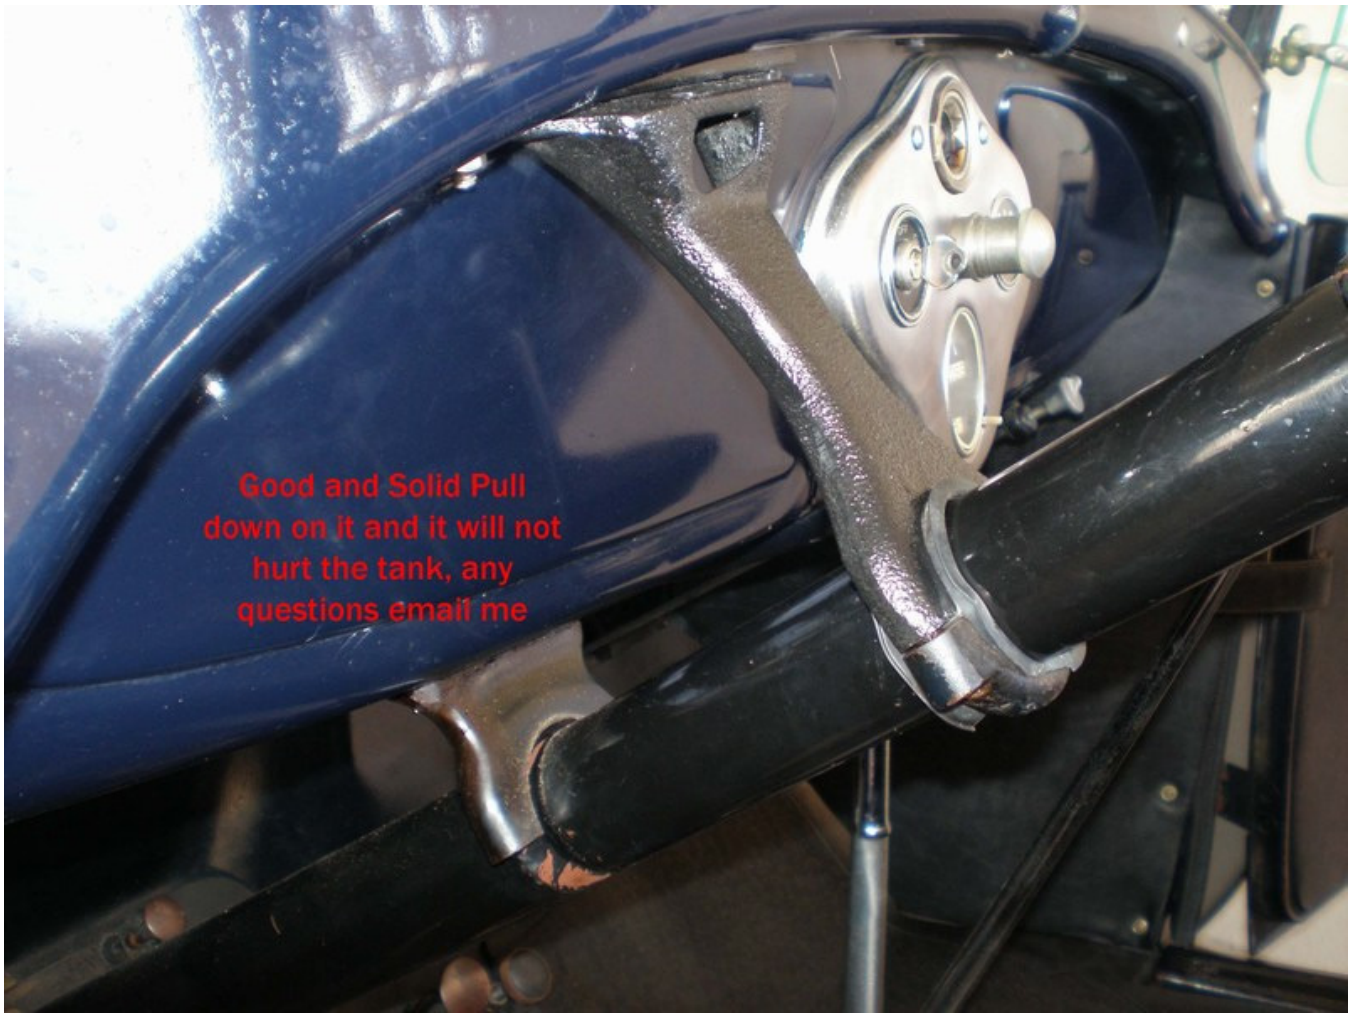

Mount Steering support with
Rubber and clamp

Using countersunk 1/4 x 1" bolts fit 3/8 x 1"x7" steel or aluminum bar to original holes. Mark hole location from the support to the bar.

Remove bar and support drill and
countersink holes for the support.

Assemble support to the bar and
then bolt it to the original holes in
dash.and replace the
rubber and lower clamp,
might have to pull down on the steer-
ing column to fit into holes.

Attach dash rail and thats it

Good and Solid Pull
down on it and it will not
hurt the tank, any
questions email me
