

Headlamp lens with solid line oval around Ford script

Headlamp lens with series of dots forming oval around Ford script

Beginning in February 1929 to the end of production, the head lamps had "TWOLITE" lenses. *Check to see that the "TWOLITE" design head lamp lenses match.* There were two types, one with an oval around the Ford script as a series of dots, the other as a solid line. *(See chart titled Lamp Lenses in this section.)* Vehicles without cowl lamps should have two bulb head lamps, a 3cp at the top and a double filament 21/21cp or 32/21cp in the center. Vehicles with factory installed cowl lamps should have head lamps with single bulb reflectors with double filament bulbs.

The lock washer and nut (head lamp swivel nut) were black enamel until mid 1930. Thereafter, the lock washer was painted black and the nut raven finished. The latch was nickel plated brass in 1928-29 and stainless steel in 1930-31. The rivets, latch spring and stud were cadmium plated.

HEAD LAMP MOUNTING BAR and LICENSE PLATE CLIPS

Check the head lamp bar for straightness, condition and correct type. Some 1928 head lamp bars had one or more Ford scripts between the head lamp mounting bolts. A pressed steel/forged bar with two slotted holes for the license plate bolts was introduced in May 1930 and discontinued in September 1930 when it reverted to a round, forged design.

Ribbed clips that hung the license plate below the bar were used from the beginning of production until May
