Starter Solenoids

The starter relay, or solenoid of Ford electrical systems is usually located right in plain sight, at the top of the passenger side of the engine bay. This makes it very convenient for service work. This also makes it the frequent target of judges and Ford admirers who might tend to look into your engine compartment when you have the hood raised at a car show. Like any starter relay, Ford units work hard over many years of start-up sequences, consequently, many of them have finally worn out and had to be replaced. Unfortunately, some of them will have been replaced with universal "fits-all" solenoids that do not look right under the hood of any Ford, much less your favorite Early V8! Worse yet, some of those replacement units are not quality units and might fail at the worst possible time. Our Ford restoration professionals are happy to help you solve the problem, with a brand new reproduction unit with authentic markings and superior components inside. You'll receive a terrific, high quality starter relay that not only looks authentic but will give you years of reliable service.

37-48 Steel case with push button allowing you to turn over your engine while working under the hood, mount on firewall
